     #SD: would be nice to make it semi automated:
     """SD
     get features like font size use
     devide them into sub catagories with specific rangies with every font meaning a
      ↪new thing: e.g bold -- can be a possible genus / largest are headers etc
     find the headers and devide things based on headers
     Would be very nice to also find a way to find  the "indentation" of the words
      ↪like if it's centered / left / right etc cause fitz doesn't pick that up and
      ↪this can help with finding headers and stuff too.
     """

     ## Purpose: this cell is a pre-processing step that will create a symlink (e.g.
      ↪book-1.pdf)
     ##          that points to the original file, and then will create new PDF
      ↪documents
```

```python
##          that are excerpts of subsets of the whole book
##          as named sections such as book-1-index.pdf or book-1-abbrev.pdf
##          The file book-X-sample.pdf contains the first 10 pages of the
  →book-1-content.pdf
##          and the sample is used to speed up development/testing later on

## https://pymupdf.readthedocs.io/en/latest/document.html#Document.delete_pages
##    In general, the performance of this method is dependent on the number of
  →remaining pages
##    NOT on the number of deleted pages
## So, keeping fewer pages is faster, and deleting more pages at once is also
  →faster
